PREFACE

The QUARTERLY CUMULATIVE INDEX MEDICUS is published in April, July, October and January. The April number indexes the journals issued during January, February and March; the July number, bound for permanence in cloth, contains, in one alphabet, references to journals published during April, May and June, with the addition of all that appeared in the April issue of the INDEX. Thus the July issue supersedes the April. The October issue indexes the journals published during July, August and September; the January issue includes the material from the October number and that for the last three months of the year. This also is bound in cloth for permanent preservation.

On pages 40-52 will be found a list of the journals indexed.

The main index is preceded by a list of new books, alphabetized as to authors, followed by a subject classification of the same material.

INSTRUCTIONS FOR USE OF QUARTERLY CUMULATIVE INDEX MEDICUS

This periodical indexes itself alphabetically, both as to author and subject entries. Following is a typical citation for an author entry covering an original contribution:

MANARA, M., Forme di linfogranulomatosi di difficile diagnosi (forma mediastinica, forma addominale). Forma commune (cervicale), Arch.di biol. 3: 3-37, Sept.-Oct. '26

The citation gives the name of the author, the title of the article in the original language if English, French, German, Spanish, Italian or Portuguese, or in translation if in other languages. Then follow the abbreviation of the title of the periodical, the volume in black-face type, paging, month (day of month if a semi-monthly, semi-weekly or weekly publication) and year, in order named, i. e., J. A. M. A. **88:**689-693, March 5, '27.

A subject entry is prepared by translation of the title if in a foreign language and by shortening to emphasize the significant portions. The author entry cited above appears as follows in the subject entry:

LYMPHOGRANULOMA
diagnosis, mediastinal, abdominal and cervical varieties, [M. Manara] Arch.di biol. 3: 3-37, Sept.-Oct. '26

In this index, original articles, biographic material and other medical literature of importance are indexed in one alphabet. In searching for a specific article, the author entry should be consulted if the name of the author is known, since the complete bibliographic reference is to be found after the author's name only. In the subject entry of a foreign title a brief English abstract of the actual content of the article is substituted for the author's title, when obscure, ill-considered or misleading. In unsigned articles, the complete title in the original language as well as a translation will be found under the subject entry. If the subject only is known, the article should be sought first under the specific word in the title that defines the subject, i. e., **ANEMIA; ENDOMETRIUM; HEMIPLEGIA;** etc.

Prefixes to chemical compounds denoting numbers of atoms or radicals, or their positions, such as mono, di, tri, ortho, meta and para, are alphabetized under the essentials constituents, the prefixes being ignored as far as alphabetical arrangement is concerned. For instance, tri-Brom-Ethanol appears in the Index under "B" as *tri***BROM-ETHANOL,** and di-Oxphenylalanine under "O" as *di***OXYPHENYLALANINE.** Likewise, figures representing the position of radicals or side chains are also ignored in the alphabetical classification. Exceptions to this rule include trade names and names of official drugs as, **ACID, trichloracetic; TRINITROPHENOL.**

Articles with title equivalent to the capitalized heading appear immediately beneath the subject entry with the name of the author only. Unclassified titles then follow in alphabetical order according to title. Sub-classifications then follow, of which the arrangement is approximately:

FOR DISEASES

acute	etiology and pathogenesis	metabolism in
blood in	experimental	mortality
carriers	heredity	pathology
complications and sequels	history	prevention
diagnosis	immunity	prognosis
epidemiology and statistics	in infants and children	therapy

FOR ORGANS

abnormalities	examination	innervation
abscess	excision	pathology
anatomy and histology	foreign bodies	physiology
calculi	function tests	roentgenography
cancer	hemorrhage	rupture
cysts	hernia	surgery
diseases	hypertrophy	tumors
diverticula	infarction	wounds and injuries

Literature referable to organs and regions of the body is classified under the particular organ or region, i. e., **BRAIN, abscess; STOMACH, cancer; FEMUR,** fractures.

Articles on the action of a drug in general or the method of administering it are indexed under the name of a drug; but articles on the action of a drug in a particular disease are indexed under the disease, i. e., an article on "The Action of Tryparsamide" is indexed under Tryparsamide, while an article on "Tryparsamide in General Paralysis" is indexed under **PARALYSIS, GENERAL, therapy.**

Biographies and obituaries appear under the heading **"BIOGRAPHIES"** and **"OBITUARIES,"** with cross references from individual names.

Numerous cross references are supplied from specific names of organs, from diseases, from eponyms, etc.

While the general scheme of indexing in this publication classifies the literature according to a specific arrangement, some subjects are, of necessity, grouped under broad, general headings. A representative list follows:

Acids
Adhesions
Anesthesia
Apparatus
Arteries
Bacteria
Cells
Contracture
Drugs
Endocrine Glands
Enzymes
Fistula
Genito-Urinary Tract
Heredity
Hospitals
Infants
Instruments
Jurisprudence, Medical
Medicine
Muscles
Nematodes
Nerves
Obstetrics
Paralysis
Reflex
Sarcoma
Surgery
Tumors
Therapeutics
Urinary Tract
Vital Statistics
Workmen's Compensation and Insurance
